# RML2PDF Test Suite - Test #012 - Tables of Contents

## Chapter 1: About this page

About these pages: the code behind this pdf should give an example of how to set up a table of contents.

There are several ways to do tables of contents. We make use of two different features: *names*, which let you refer to other page numbers or bits of text and ensure the references are filled in as the document is built; and *forms*, which let you defer drawing things until later on.

RML is usually generated by another program. We assume this other program can keep track of the headings as it goes through. So, if you have a book with ten chapters, you will have to write out the chapter names ten times in the TOC as well as in each chapter - but RML will sort out the page numbers for you. The source for this example and the comments below should be enough to put it together.

## Names and References

The **name**, **getName**, **namedString** and **evalString** tags are all used in combination to set up cross references. You can give a name to a piece of text, and refer to it elsewhere in the document. If we want to refer to, say, the page on which Chapter 3 starts, we would put the following in the heading or some text just after it:

```
Blah blah<namedString id="Chapter3Start"><pageNumber/></namedString> blah
```

The **pageNumber** tag returns the current page number, and the **namedString** one sets up an internal variable which can be referenced ANYWHERE in the document, before or after the definition. To display this page number elsewhere in the document, you would place the following inside some other paragraph or literal string:

```
...see chapter 3 on page <getName id="Chapter3Start"/> for details.
```

You don't have to use names with page numbers - you can use this construct to store any text, such as references to chapter names or figures.

This cross-reference mechanism is the basis of all indexes, tables of contents, cross references and so on. However it has performance implications. RML will reformat the whole document again and again until all the references are **resolved**. This means that if you define names at the beginning of the document and refer to them later, it can work at full speed (as each paragraph's content is fully known when it is drawn). But if you refer forwards, RML makes two - or in some cases three - passes through the document. Your job will be 2-3 times slower. We'll deal with this in a moment.

In real world documents there is another complication. You might have a fancy cover or front matter, and the logical page number 1 used in printing might not actually be page 1. Likewise, you might be doing a batch of customer docs in one RML job. So, in this case we have a more involved expression, and use the **evalString** tag to work out the number we want. In this example we did this by creating a name for the first page after the cover,

```
...<namedString id="page1">
  <evalString default="XXX">
    <pageNumber/>-<getName id="pageZero"/>+1
  </evalString>
</namedString>...
```

This says 'work out the page number of the cover, add 1 and store that in the variable "page1" for future use'.

## Forms and Deferred Drawing

Forms (or as Adobe calls them, Form XObjects) are graphics drawn outside of the individual pages in a PDF file, and which may be used more than once or referred to by name. Conveniently, we let you refer to a form early in a document, and define it later. If you fail to define it later on, you will get an error message on generating the PDF. This lets us get around the two-pass problem: we don't actually draw the table of contents until the end, when we know all the named page number references and can do it in one pass. The techniques used here is to "draw" a form called TOC in the cover page template, and define it at the end of the document. As noted above, it's the programmer's

# **RML2PDF Test Suite - Test #012 - Tables of Contents**

job to regenerate the chapter titles, but the page numbers take care of themselves.

Ignore the following pseudo-bio babble, it's there for padding

## **Politics of Foramenifera**

Globorotalia Menardii coils according to water temperature and prevailing political situations. Preferring alkaline rather than acidic environments they are however intuitively left-wing

## **Drosophila Melanogaster**

How fruit flies changed my life. Blah blah waffle waffle blah blah yawn yawn .....

## **CHAPTER5**

### **Canis Lupus**

Little Red Riding Hoody yum yum.....

**CHAPTER6**

**Homer Simpson**

Hmmmmhhh duhlicious.....

# **RML2PDF Test Suite - Test #012 - Tables of Contents**

## **Itchy & Scratchy**

Painful for the cat anyhow.....

# ***RML2PDF Test Suite - Test #012 - Tables of Contents***

## **Rattus rattus**

So bad they named him twice Blah blah waffle waffle blah blah yawn yawn

# ***RML2PDF Test Suite - Test #012 - Tables of Contents***

## **Mickey Mouse**

So good he's universally hated blah blah yawn yawn

# ***RML2PDF Test Suite - Test #012 - Tables of Contents***

## **ReportLab TOC Handling**

Better than nothing, but not by much!

# **RML2PDF Test Suite - Test #012 - Tables of Contents**

## **Googlewhackblatt**

Not many returns when you google for it!

# ***RML2PDF Test Suite - Test #012 - Tables of Contents***

**Blairism**

Ignoble!

# ***RML2PDF Test Suite - Test #012 - Tables of Contents***

## **G'day Mate**

I'm pleased to meet you.

# **RML2PDF Test Suite - Test #012 - Tables of Contents**

**Avago Ya Mug**

Would you like to try?

# ***RML2PDF Test Suite - Test #012 - Tables of Contents***

## **Brownian Development**

Code churning!

# ***RML2PDF Test Suite - Test #012 - Tables of Contents***

## **Russian Release**

Testing starts after delivery!

# ***RML2PDF Test Suite - Test #012 - Tables of Contents***

## **We're in a "GO" Mode**

We really don't have anything that's capable of anything sensible!

# ***RML2PDF Test Suite - Test #012 - Tables of Contents***

## **Anarchist Software License**

DLL caller 0.2.0.8 for TCL is released to the world as is with minimal support for the sum of £1/Annum for any number of users.

I have paid myself £1.

This software is now free.

God rest and protect all who rely on it.

There will be Death and there will be Taxes; Death will be preferable, but Taxes will last longer.
